

12/27/94

From Page No. _____

Purpose: Mg titration in PCCy PCCy with Tag and Tag + D.V.

did at 200 μ M dNTP.

14 μ M primer
50 μ g template

Mg 1, 1.5, 2, 2.5, 3 mM
(T1-T3) 2U

(2 + 0.02) numbered

prepared premix with Tag or Tag + D.V. separately 45'

added diff amount of Mg in ϕ al

same cycling conditions

Result:

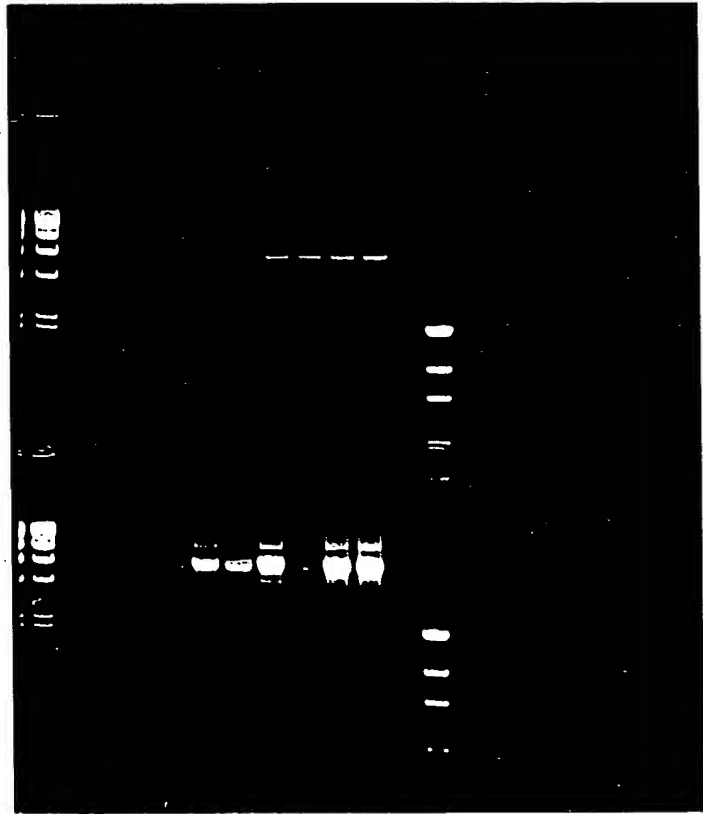

Tag 2U.

2U of Tag: increase the conc of Mg to 2.5 mM

2U considerably increase the product yield

2U Tag + 0.02 U D.V. even at 1.5 mM Mg product seen.

more product now as more misprim with increasing conc Mg.

1 1.5 2 2.5 3 mM Tag + D.V. 2 + 0.02
